Introduction

Occupational wage data is one of the most frequently requested information. To satisfy this need, in 1996 the U.S. Department of Labor, Bureau of Labor Statistics (BLS) expanded the Occupational Employment Statistics (OES) survey to collect wage data by occupation. This report is based on OES surveys collected from establishments in the State of Hawai'i in May 2008, November 2007, May 2007, November 2006, May 2006, and November 2005. Data was solicited from approximately 5,370 establishments. Over 4,130 establishments provided usable responses, which amounted to a response rate of 77.0 percent of the establishments and represented 80.5 percent of employment.

The OES survey is a federal/state cooperative project. It is conducted semi-annually in every state following BLS guidelines. Because this methodology is consistent among all states, the data can be compared from state to state. Data are collected from a sample of establishments, primarily by mail. When an establishment's response is critical to the survey, follow-up telephone calls and personal visits are also made.

The OES employment and wage data is used in different ways. Employers, educational planners, work force analysts, economists, and others use the information to formulate business economic policy, identify types of skilled workers needed, and structure school training programs and vocational curriculum. The occupational employment data has also been a major source of detailed occupational employment by industry and is used to project employment. These data, however, should not be used as the prevailing wage in the Foreign Labor Certification Program. For more information about this program, see <http://www.foreignlaborcert.doleta.gov/wages.cfm>.

Comments regarding this report are welcomed. Please call (808) 586-9023 or write to:

Technical Notes

The OES survey is funded by the Bureau of Labor Statistics (BLS). BLS provides the procedures and technical support, draws the sample, and produces the survey materials, while the State Workforce Agencies (SWAs) collect the data. BLS produces cross-industry estimates for the nation, states, metropolitan statistical areas (MSAs), and nonmetropolitan area levels. BLS releases cross-industry estimates at all levels. In addition, BLS releases industry estimates at the national level while the SWAs release them at the state and MSA levels.

Scope of Survey

The OES survey is a semi-annual mail survey measuring occupational employment and wage rates for all full- and part-time wage and salary workers in nonfarm establishments. In 2002, the OES survey switched from industry coding based on the Standard Industrial Classification (SIC) system to that based on the North American Industrial Classification System (NAICS). For more information about NAICS, see the BLS website at <http://www.bls.gov/bls/naics.htm>. Surveys collect data for the payroll period including the 12th of May or November. They do not cover the self-employed, owners and partners in unincorporated firms, household workers, or unpaid family workers.

The OES survey samples and contacts approximately 1,000 establishments each in May and November of each year. In the course of a 3-year survey cycle, over 6,000 establishments are contacted. While estimates can be made from a single year or 2 years of data, the 3-year sample allows the production of estimates at fine levels of geographic, industrial, and occupational detail.

The state Unemployment Insurance (UI) file provides the universe from which the OES survey draws its sample. Establishments were stratified by metropolitan and nonmetropolitan areas and industry. Samples selected in panels prior to May 2005 were stratified using MSA definitions based on the 1990 MSA Standards. Beginning with the May 2005 panel, the sample was stratified using the new MSA definitions based on the 2000 MSA Standards. State and local government are surveyed as a universe on an annual basis during the November panel. The OES survey collects wage data for 12 contiguous non-overlapping wage intervals, rather than in exact dollar amounts. The uppermost interval (interval L) is open.

Surveys were initially mailed to virtually all sampled establishments. Personal visits were made to some of the larger establishments. In addition, two other mailings were made to non-respondents at 1-month intervals and a third follow-up mailing was made to establishments that had less than 20 employees. Follow-up telephone calls and personal visits were also made to non-respondents considered critical to the survey.

Occupational coding is based on the Standard Occupational Classification (SOC) system. The SOC system, which is used by all Federal Statistical agencies for reporting occupational data, consists of 821 detailed occupations, grouped into 449 broad occupations, 96 minor groups and 23 major groups. For more information about the SOC, please see the BLS web site at <http://www.bls.gov/soc/home.htm>. The OES program provides occupational employment and wage estimates at the major group and detailed occupation level. Structured

survey forms are sent to establishments with a benchmark employment of 10 or higher. These forms contain between 50 to 225 SOC occupations selected on the basis of the sample establishment's industry classification. To reduce paperwork and response burden, no form will list every single SOC occupation. In addition, at the end of the forms, respondents can write-in data for any occupation that was not pre-listed. Unstructured survey forms are sent to establishments with a benchmark employment of 9 or less. No occupations are listed in these forms. Respondents are asked to write-in occupational employment data for all workers.

Estimation Methodology

Producing estimates using the 3 years of sample data provides significant sampling error reductions. In particular, the combined data allow us to produce estimates for smaller geographic areas with a reasonable degree of reliability. Combining data from past panels, however, have their limitations because five sixth of our wage data are "dated." To update our "dated" wages, changes in compensation between current panel and a past panel are measured using the Bureau of Labor Statistics' Employment Cost Index survey. This change is captured as an inflation factor which is applied to the "dated" wages. For more information about the wage updating process please visit the website http://www.bls.gov/oes/current/oes_tec.htm.

The May 2008 OES survey also used a "nearest neighbor" hot deck imputation procedure to impute occupational employment totals for establishments that reported no employment data. For establishments that reported (or imputed) occupational employment totals but did not report an employment distribution across wage intervals, a variation of mean imputation was used to impute the distribution. During estimates processing, OES employment data were benchmarked to the average employment for May 2008 and November 2007 from the BLS Quarterly Census of Employment and Wages.

Reliability of the Estimates

The occupational wage rates in this report are estimates derived from a sample survey. Two types of errors are possible in an estimate based on a sample survey - sampling error and non-sampling error. Sampling error occurs because our observations are based on a sample, not on the entire population. Non-sampling error occurs because of response, non-response, and operational errors during the survey process. Examples of non-sampling error include receiving erroneous data from the respondent, entering collected data into the database incorrectly, and processing collected data improperly. Sampling error is measurable; non-sampling error is not. We use a statistic known as relative standard error (rse) to measure sampling error. RSE is the ratio of an estimate's standard error to the estimate itself.

Because the survey includes only wage and salary-type compensation, hourly earnings for some occupations may not be reflected accurately. For example, apartment managers often receive rent-free housing. In addition, years of experience and professional levels, apprentices and journeymen, new and experienced workers, and union and non-union workers are not usually distinguished in the OES survey questionnaire.

Published Data

This report provides occupational employment and wages for approximately 708 occupations in the State of Hawai'i and 657 occupations in Honolulu MSA. The data in this report are also available on the Internet at either the HIWI website at <http://www.hiwi.org> or at the BLS website http://www.bls.gov/oes/current/oes_hi.htm. National data, more technical information on the survey, and occupational descriptions can be obtained at <http://www.bls.gov/oes/>.

Survey Definitions and Concepts

The following concepts and definitions are used in the OES Survey.

Employment is the number of persons employed in an occupation. It includes full-time or part-time employees; workers on paid vacations or other types of leave; salaried officers, executives, and staff members of incorporated firms; employees temporarily assigned to other units; and employees for whom the reporting unit is their permanent duty station regardless of whether that unit prepares their paycheck. It excludes the self-employed, owners/partners of unincorporated firms, and unpaid family workers. Employees are reported in the occupation in which they are working, not necessarily for which they were trained.

The figure represents an estimate of total wage and salary employment in an occupation across the industries in which it was surveyed. The data for specific occupations are collected from establishments within industries that are the predominant employers of labor in those occupations.

Employment Relative Standard Error (RSE) is a measure of the reliability or precision of the employment estimate. The relative standard error is defined as the ratio of the standard error to the survey estimate. For example, a relative standard error of 10 percent implies that the standard error is one-tenth as large as the survey estimate.

An **establishment** is a physical location of a certain economic activity, for example, a factory, mine, store, or office. Generally a single establishment produces a single good or provides a single service. An enterprise (a private firm, government, or non-profit organization) could consist of a single establishment or multiple establishments. A multi-establishment enterprise could have all its establishments in one industry (i.e., a chain), or could have various establishments in different industries (i.e., a conglomerate).

Metropolitan Statistical Area (MSA) is an area consisting of a group of contiguous cities and towns, which contains at least one central city of 50,000 inhabitants or more, or a Census Bureau-defined urbanized area (of at least 50,000 inhabitants).

Occupational Title: Title of the occupation.

SOC Code: a six-digit Standard Occupational Classification code. Each of the 801 detailed occupations used in the OES survey is categorized into one of 22 major occupational groups, depending on the first two digits of its SOC code.

If the first two digits are:	the occupation is classified as:
11	Management
13	Business and Financial Operations
15	Computer and Mathematical
17	Architecture and Engineering
19	Life, Physical, and Social Science

21	Community and Social Services
23	Legal
25	Education, Training, and Library
27	Arts, Design, Entertainment, Sports, and Media
29	Healthcare Practitioner and Technical
31	Healthcare Support
33	Protective Service
35	Food Preparation and Serving
37	Building and Grounds Cleaning and Maintenance
39	Personal Care and Service
41	Sales
43	Office and Administrative Support
45	Farming, Fishing, and Forestry
47	Construction and Extraction
49	Installation, Maintenance, and Repair
51	Production
53	Transportation and Material Moving

Wages are straight-time, gross pay, exclusive of premium pay. Included are base rate, cost-of-living allowances, guaranteed pay, hazardous-duty pay, incentive pay including commissions and production bonuses, tips, and on-call pay. Excluded are back pay, jury duty pay, overtime pay, severance pay, shift differentials, non-production bonuses, and tuition reimbursements.

Annual Wage estimates for most occupations in this release are calculated by multiplying the mean wage by a “year-round, full-time” hours figure of 2,080 hours per year (52 weeks by 40 hours). Thus, the annual wage estimates may not represent the actual annual pay received by the employee. Some workers typically work less than 40 hours per week, year round. For these occupations, the OES survey collects and reports either the annual salary or the hourly wage rate, depending on how the occupation is typically paid, but not both. For example, teachers, flight attendants, and pilots may be paid an annual salary, but do not work the usual 2,080 hours per year. In this case, an annual salary is reported. Other workers, such as entertainment workers, are paid hourly rates, but generally do not work 40 hours per week, year round. For these workers, only an hourly wage is reported.

Mean Hourly Wage is the total wages that all workers in the occupation earn in an hour divided by the total employment of the occupation. To calculate the mean hourly wage of each occupation, total weighted hourly wages are summed across all intervals and divided by the occupation’s weighted survey employment.

Median Wage is the estimated 50th percentile of the distribution of wages based on data collected from employers in all industries; 50 percent of workers in an occupation earn wages below, and 50 percent earn wages above the median wage.

Wages of Hawaii's 20 Largest Occupations 2008

SOC Code	Occupational Title	Employment	Median	Mean Wage	
				Hourly	Annual
41-2031	Retail Salespersons	27,060	\$10.48	\$12.23	\$25,430

⁽¹⁾ = Estimates for detailed occupations do not sum to the totals because the totals include occupations not shown separately. Estimates do not include self-employed workers.

⁽²⁾ = Annual wages have been calculated by multiplying the hourly mean wage by a "year-round, full-time" hours figure of 2,080 hours; for those occupations where there is not an hourly mean wage published, the annual wage has been directly calculated from the reported survey data.

⁽³⁾ = Employment relative standard error (RSE) is a measure of the reliability of a survey statistic. The smaller the relative standard error, the more precise the estimate.

⁽⁴⁾ = Wages for some occupations that do not generally work year-round, full time, are reported either as hourly wages or annual salaries depending on how they are typically paid.

⁽⁵⁾ = This wage is equal to or greater than \$80.00 per hour or \$166,400 per year.

⁽⁸⁾ = Estimates not released.

⁽⁹⁾ = Estimates not available.

⁽¹⁾ = Estimates for detailed occupations do not sum to the totals because the totals include occupations not shown separately. Estimates do not include self-employed workers.

⁽²⁾ = Annual wages have been calculated by multiplying the hourly mean wage by a "year-round, full-time" hours figure of 2,080 hours; for those occupations where there is not an hourly mean wage published, the annual wage has been directly calculated from the reported survey data.

⁽³⁾ = Employment relative standard error (RSE) is a measure of the reliability of a survey statistic. The smaller the relative standard error, the more precise the estimate.

⁽⁴⁾ = Wages for some occupations that do not generally work year-round, full time, are reported either as hourly wages or annual salaries depending on how they are typically paid.

⁽⁵⁾ = This wage is equal to or greater than \$80.00 per hour or \$166,400 per year.

⁽⁸⁾ = Estimates not released.

⁽⁹⁾ = Estimates not available.
